HOW TO USE YOUR PARTS AND SERVICE MANUAL INDEX

The index was developed to cover the parts and service literature for your attachment. Each index covers one individual attachment, as indicated by attachment model and serial numbers listed under the Long Reach logo.

In the section labelled General Parts and Service Information, you will find installation, operation and service documents listed, as well as warranty and model information. The Customer Parts List section names the part number. The Description names the part itself. The Page Number lists the relevant drawing number for that part.

For example, under the Customer Parts List, you may find the number YCSY-0333-LC2DM, its Description, Cylinder Assembly, and the parts coverage is on Page Number YCSY-0313-CHTDG. This indicates that the parts coverage for Cylinder Assembly YCS-0333-LC2DM is listed on Page Number YCSY-0313-CHTDG in the parts section of your manual. If you go to the relevant pages, you will find a drawing of the Cylinder Assembly and a parts list. You now have the correct information to order a replacement cylinder or cylinder parts as required.

As another example, under the Customer Parts List, you may find the number 2500542, its Description, General Arrangement, and the parts coverage is on Page Number 2500542-LR7366. Turning to the parts coverage in your manual, you will find a drawing of the general arrangement specific to Serial Number LR7366. The drawing will help you, if you are servicing the attachment and need to order parts.

Please note: The data listed is adequate for normal operation and service, based on years of experience, but is not exhaustive. Please contact our Service Department at 800-285-7000 for information beyond what is offered here.

The following are explanations of some symbols used in your index:

- * Related coverage has been back-ordered, because of revisions to existing data. Can also mean the development of new material is in progress.
- (Ref.) Indicates material that is similar to, but not exact. Use this information for reference only.

We suggest that you study your index along with the relevant parts or service materials.
