## **SERVICE BULLETINS NEW AND REVISED COVERAGE**

Monthly we make a dealer mailout of material developed during the previous (30) day period. If said material is applicable to a specific unit by Serial Number it is so stated, otherwise, application of material is general.

To determine unit application in reference to general parts coverage received, compare parts numbers against the part numbers listed in your Master Check Sheets, or your Unit Master Check Sheets, or your Numerical Parts File. Determine the Master Check Sheet section by the part number description, such as Engine, Axle, Electrical, etc.

Service Bulletin coverage is determined by model and group number.

Chances are, there will be coverage in each mailing that does not apply to your units. The volume of material printed each month precludes the feasibility of issue in respect to specific units in your area.
