

### Automated Greasing System

With an optional automated grease system, all connected grease points are lubricated automatically.

## NOTICE

*The automatic greasing system greatly reduces the time and effort for greasing the machine. However there are grease points that are not served by the automatic system and must be greased by hand. See Lubrication in section 5-3 for more information.*

Automatic Greasing System

1. Bleeding and grease overflow outlet
2. Electrical connector
3. Filler coupling with grease filter
4. Test Push-Button
5. Alarm indicator LED
6. Low grease level indicator LED
7. System activated indicator LED
8. 3-digit display
9. Decimal dot
10. Switch-button
