

Improve Winch Controllability

With Allied's Improved BLUE Manifold The Competition is Green with Envy

Allied winches have always been at the forefront of towing winch solutions for heavy equipment. This is especially true for extreme-duty applications such as pipeline construction, where the winch must deal with the heaviest loadings and must be able to position the load with the utmost precision.

Allied's latest innovation, the Generation II electronic control, provides fine line control rivaling a hydraulic winch with NO LOSS in pulling power and no load roll back. All while not risking overheating the tractor's cooling circuit.

Hydraulic winches are limited by the hydraulic system, whereas a PTO driven winch is limited by the tractor's horsepower. This means maximum rated line pull at both bare drum and full drum in most cases.

We recommend opening the Valve Cover Plate on your winch to determine if you've already upgraded to the improved blue manifold.

Purchase your Winch Manifold Upgrade Kit today to experience the finest in line speed control.

W12E	
Valve Update Part Number	Applies to Winch Serial Numbers
2315950	Gear Ratios 7 & 8 with serial numbers 1456 and below
2315951	Gear Ratios 7 & 8 with serial numbers 1457 thru 1574
